

Sangfor Athena EPP Datasheet

The Future of Endpoint Security

Sangfor Athena EPP (formerly Sangfor Endpoint Secure) is a Modern Endpoint Protection Platform (EPP) that combines Next-Generation Antivirus (NGAV), Endpoint Detection and Response (EDR), and Endpoint Management into a single, unified solution. This all-in-one approach provides comprehensive protection to address today's complex endpoint security challenges.

Advantages and Characteristics

Ransomware Protection and Recovery

Sangfor Athena EPP Key Capabilities

Protects against all types of ransomware through static and dynamic AI-based detection engines.

Detects suspicious ransomware-related processes and blocks them *in as little as 3 seconds* to ensure minimal impact on users' assets.

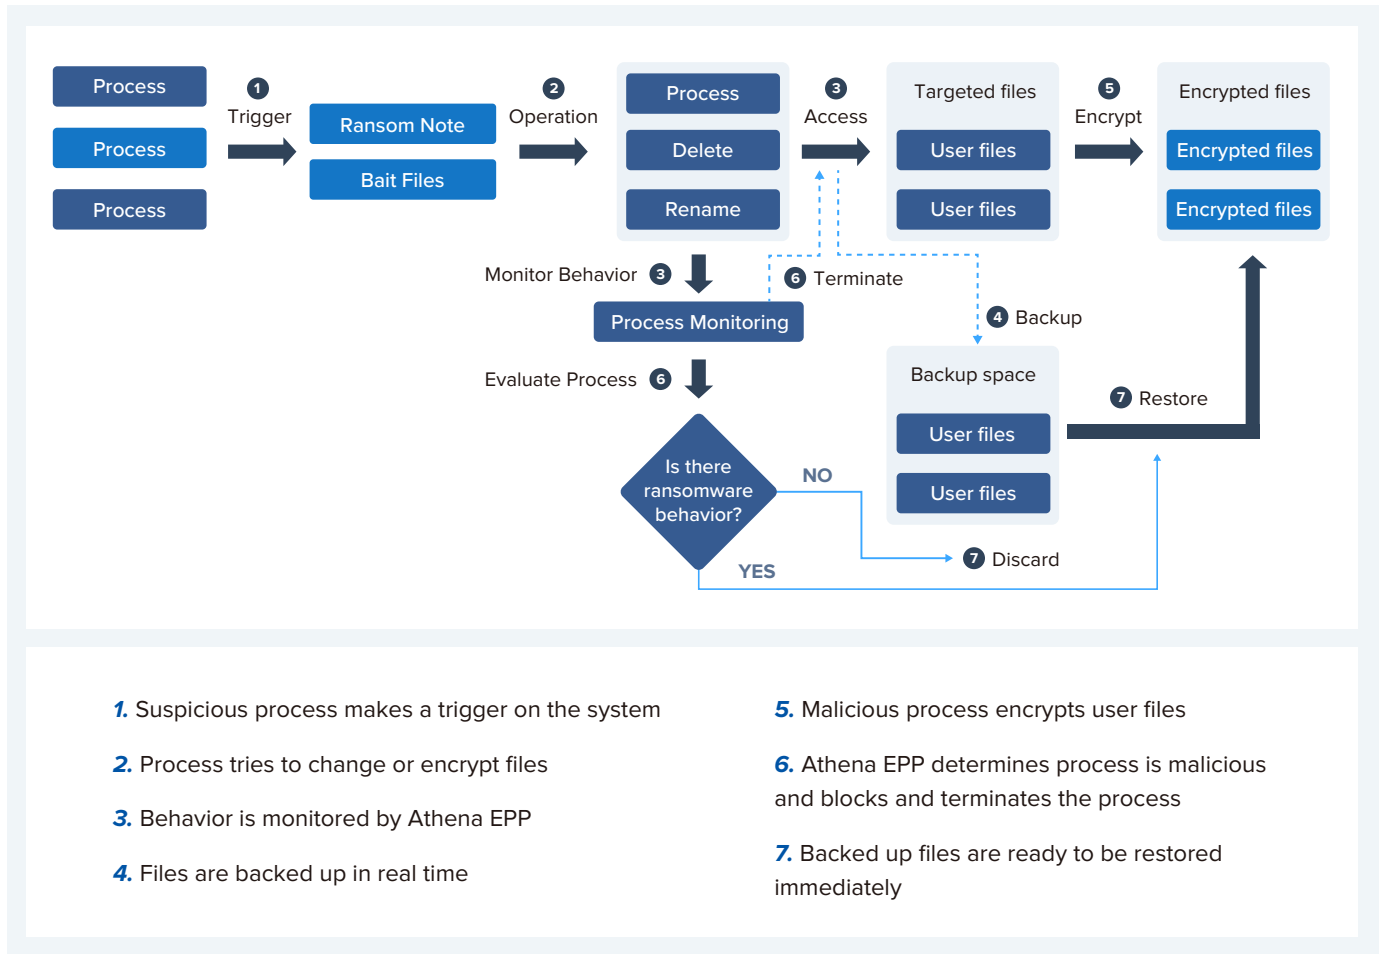

Ransomware indicators of compromise are collected from over 12 million devices deployed with Athena EPP, allowing it to *achieve a detection accuracy rate of 99.83%*.

In addition to existing ransomware protections, such as bait files and RDP two-factor authentication, Athena EPP provides dynamic file backup and recovery capabilities to fully secure and restore your data in case of ransomware encryption.

Ransomware Protection and Recovery

AI-powered Malware Detection Engine

Unlike traditional antivirus engines, Engine Zero uses AI-driven, signature-less detection to identify unknown viruses and variants, including those not recorded in antivirus databases.

Sangfor Athena EPP Industry Recognitions and Certifications

	Strong Performer in Gartner® Voice of the Customer for Endpoint Protection Platforms with a 95% "Willingness to Recommend"		Certified Windows Protection by Microsoft
	Certified Best Windows Antivirus Solution and "TOP PRODUCT" Award by AV-Test		Gold OPSWAT Endpoint Security Certification for Anti-Malware
