SECPOINT DARK WEB SEARCH 6.1

Identify exposed company information before attackers can abuse it.

SecPoint® Penetrator™ Dark Web Search helps organizations identify whether company information, user accounts or credentials have appeared in known breach and exposure data.

Key Benefits

Quickly identify whether company domains, email addresses or user credentials have been exposed.

Detect leaked account information that could be used for phishing, credential stuffing or unauthorized access.

Identify compromised accounts before exposed credentials are abused by attackers.

Support security audits, breach investigations and technical risk assessments.

Provide organizations with increased visibility into external credential exposure.

Help security teams prioritize password changes, account protection and MFA deployment.

How It Works

The administrator specifies the domains, email addresses or other information that should be checked.

SecPoint Penetrator compares the information against available Dark Web and breach exposure data and identifies matching records that may indicate compromised accounts or leaked information.

Results are presented directly to the administrator so exposed accounts can be investigated and remediated.

Privacy – Offline Credential Checking

Customer search data and credentials are processed locally/offline by the SecPoint Penetrator.

Customer credentials are not submitted to external Dark Web search engines or third-party lookup services as part of the comparison process.

This avoids exposing sensitive customer information merely for the purpose of checking whether it has previously been compromised.

Customer data stays under the customer's control.

Typical Uses

Corporate credential exposure checks

Domain and email breach monitoring

Security and vulnerability assessments

Incident-response investigations

Password and account-security reviews

MFA readiness and account-hardening projects

SecPoint® Penetrator™ – Find exposed information before attackers use it.

VOTRE PARTENAIRE TECHNOLOGIQUE POUR DES INFRASTRUCTURES IT SÉCURISÉES ET PERFORMANTES

EXPERTISE
Des solutions adaptées
à chaque environnement
